Integrate Multiple Systems into a Single Platform

1 or 10 Lab Instruments, Multiple Billing Platforms and teams, a Dozen Reference Labs and EHR systems are integrated into a single platform, automating the ordering, processing, releasing, and billing of tests and samples.

More than an LIS, we are a full Lab Management Platform.

Always Automate

Cut your costs and your errors, reduce time to billing, and track every process with our automation.

What workflow problems do you experience? Let's try and automate it

Scale from 1 to 1,000+

Our cloud platform means your lab can add as many physicians, offices, groups, collectors and users as you need.

Never worry about buying more servers again.
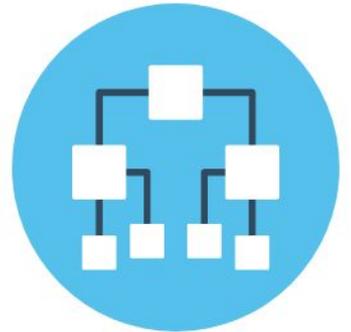

Meeting the Laboratory Needs

You have standard workflows and procedures, and we can meet those needs. You ask for customizations and we build it for you, it's that simple.

Complete Transparency

Whether you want a deep dive into your test results, patient demographics, or to provide 3rd party marketing organizations detailed tracking, we have you covered!

Notifications for Everyone

SMS, email, and beyond - how do you want your collectors, physicians, lab techs, and patients to be notified, because we can handle it for you.

No Supplies, No Problem

Our platform has a full CRM for physician offices to order and reorder supplies straight from the portal.
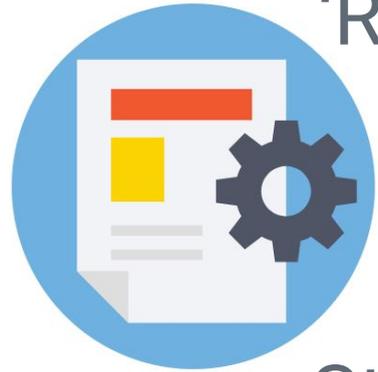

Oh, they can also directly order a shipment pickup, too!

E-Requisitions or Paper

Our platform ensures an error free, 'Ready to Test' and 'Ready to Bill' lab order. We can also provide insurance validation on the spot.

Still have paper orders? We can help out with out with our streamlined data entry process

Simple Orders and Signatures

Order on your computer and capture the patient or physician signature on a Mobile App, it's that simple!

Signature

It's All About the Patient

We can provide a Patient Portal or tie directly into your current portal. For patient payments, we can collect that for you as well.
